Associated Training Corporation Presents

Mini-Distribution Transformers

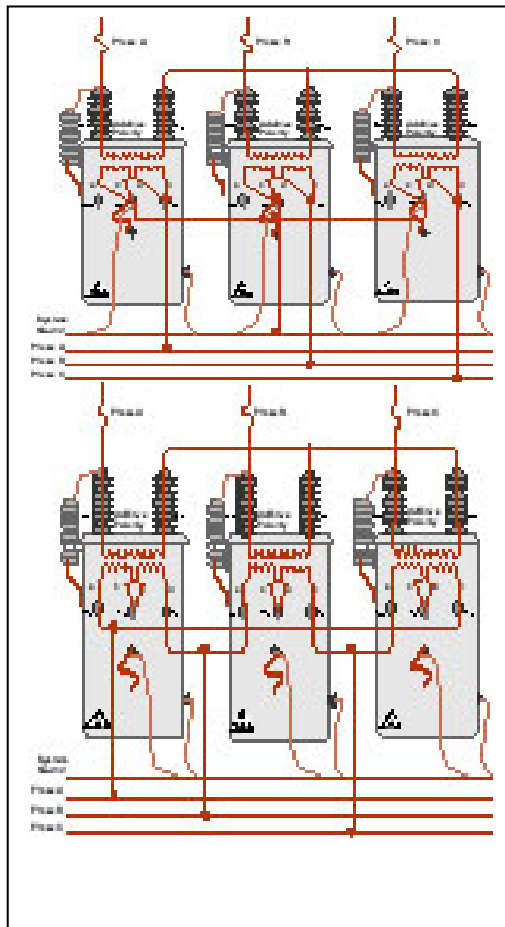

Providing training tools for today's employees

Connection Diagrams

Practice connecting all these and more!

Benefits of Using ATC's Mini - Transformers

Employees avoid working with high voltage circuits during training exercises. ATC's mini transformers use 120 Y or 208 Δ voltage input.

Unique designed secondary provides low side voltages of 120/208, 277/480, 240/480, 120/240 using just six (6) transformers.

Our newest design provides the ability to connect the high side either wye or delta.

Units are designed to have a high internal impedance making them ideal for training new or old employees without concern for flash injuries or accidents.

Each transformer can be opened for practicing paralleling windings or training employees how to change internal connections.

What You Get When You Order the Complete Training Package \$1885.00

PowerPoint presentation for Instructors with over 175 slides complete with instructional notes. (Includes connection and fusing diagrams).

Designed for classroom presentation followed by hands-on training.

Includes : 6 Transformers

Plug and Play PowerPoint Presentation

Reproducilble Student text

Options for Ordering:

You can order three (3) transformers for Three Phase Banks without PowerPoint Presentation - your choice for only \$695.00

Mounting Poles Available by special order or request a diagram to make your own.

Email us for a PDF example to view this exciting concept.

To Order:

Call 972-889-9075 or

Email: sales@atc-trng.com

Plug and play presentation requires PowerPoint Player, CD drive, and 100 megabytes free disk space.

New Models Have Three
Primary Bushings for
Connecting High Side Wye
or Delta
